

⑤ Online shopping system

- The system is used by users who can be an admin, a session manager or a customer.
- The admin handles actions like create and delete department and product. He can view the catalog details, and update new product details or existing ones can also manage customers.
- The customer can register and login to the system, he/she can buy products by searching and also update their profile.
- The session manager manages the session for a customer like listing products, getting customer details and give order details.
- A shopping cart feature exists which lists all products a customer intends to buy.
- The various order can be placed in the system by giving relevant order details.
- There exist different departments which contain various categories of products and their info.
- Once an order is placed the shipping info of the product must be available for product delivery to customer.
